

BIOGRAPHY

HidroFarm was founded by two partners, Plarent Paco and Ina Nanaj in order to return the attention in the national and regional market to quality and healthy production through the use of professional skills and technology while preserving regional cultivars without harming the environment.

Who we are.

We are a group of highly educated people with different experiences in the field of agriculture. Our experience at different administrative levels both in the state and in business has created our confidence and opportunity to build a sustainable business model.

After several years of our engagement in the state administration, we decided to create our company with a single purpose, to offer quality products and services in the agricultural sector, starting from the construction of greenhouses with high technology to provide a more favorable environment for agricultural production, introducing overseas high cultivation hydroponically technology and adapting this technology to the conditions of the Albanian terrain. We have also put into practice the farm management service and technical assistance. To achieve these, our partners around the world are as committed as we are to put in Albania even though it is considered a small market, and to improve the way of cultivation and the technology of growth and protection of production. Our goal is to return the production in the Albanian to organic production due to the climatic conditions that the country favors

OUR EXPERIENCES

We started with the construction of our first greenhouse in Vora, Tirana in 2014-2016

Construction of the Farm in Kashar, Tirana for the organic production of fresh vegetables in 2015-2019.

Construction of the greenhouse with the hydroponic system for the first time in Albania, all in water substation in 2018.

Construction of the indoor organic Microgreens production system in 2019 in Tirana.

Construction of organic farm in 2021 in Fier, Vajkan.
